Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                 CATALYTIC ACTIVITY: L-histidine = urocanate + NH(3).
PATHWAY: Histidine degradation; first step.
SUBCELULAR LOCATION: Cytoplasmic (Potential).
PTM: Contains an active site 4-methylidene-imidazole-5-one (MIO), which is formed autocatalytically by cyclization and dehydration of residues Ala-Ser-Gly (By similarity).
SIMILARITY: Belongs to the PAL/histidase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            -I-CATALYTIC ACTIVITY: Libitidine = urocanate + NH(3).
-I-PATHWAY: Histidine degradation; first step.
-I-SUBCELLULAR LOCATION: Cytoplasmic (Potential).
-I-PTM: Contains an active site 4-methylidene-imidazole-5-one (MIO), which is formed autocatalytically by cyclization and dehydration of residues Ala-Ser-Gly (By similarity).
-I-SIMILARITY: Belongs to the PAL/histidase family.
                                                                                                                                                                                                    Gloeobacter violaceus.

C. - CATALYTIC ACTIVITY: L-histidine = urocanate + NH(3).

- CATALYTIC ACTIVITY: L-histidine = urocanate + NH(3).

- CATALORIS ACTIVITY: L-histidine degradation; first step.

- SUBCELLULAR LOCATION: Cytoplasmic (Potential).

- PTM: Contains an active site 4 methylidene-imidazole-5-one (MIO),
Which is formed autocatalytically by cyclization and dehydration
of residues Ala. Ser-Gly (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 50 PAYGINTGFGRLASTHIPHDQLELLQKNLVLSHAVGVGEPMARPVVRLLMALKLSSLGRG 109

Natl. Acad. SCI. US.A. 101:14240-14245(2004).

-! CATALYTIC ACTIVITY: L-histidine = urocanate + NH(3).

-! PATHWAY: Histidine degradation; first step.

-! PATHWAY: Histidine degradation; first step.

-! SUBCELLULAR LOCATION: Cytoplasmic (Potential).

-!- PTM: Contains an active site 4-methylidene-imidazole-5-one (MIO), which is formed autocatalytically by cyclization and dehydration of residues Ala-Ser-GIV (By similarity).

-!- SIMILARITY: Belongs to the PAL/histidase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              STRAINER95243;

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
FILE REPERENCE: CLOO1307
CURRENT APPLICATION NUMBER: US/09/949,016
CURRENT PILING DATE: 2000-04-14
PRIOR APPLICATION NUMBER: 60/241,755
PRIOR PILING DATE: 2000-10-20
PRIOR FILING DATE: 2000-10-3
PRIOR FILING DATE: 2000-0-09-08
NUMBER: OF SEQ ID NOS: 207012
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 6174, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;
FILE REFERENCE: CL001301

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT FILING DATE: 2000-04-14
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               405

GENERAL INFORMATION:

APPLICANT: E.I. du Pont de Nemours and Company, Inc.

APPLICANT: Huang, Lixuan

APPLICANT: Xue, Zhixiong

TITLE OF INVENTION: Draw and Amino Acid Sequences of a Tyrosine Ammonia Lyase Enzyme

TITLE OF INVENTION: from the Bacterium Rhodobacter sphaeroides

TITLE OF INVENTION: 1 From the Bacterium Rhodobacter sphaeroides

CURRENT PAPLICATION WHOBER: US/10/621,826

CURRENT FILING DATE: 2003-07-17

NUMBER OF SEQ ID NOS: 7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                          526
